

HSP guarantees you the highest softening performance of a downflow system. The technology improves the efficiency of a downflow softener in order to highly reduce your salt and water consumption. HSP? The most economical & ecological way to obtain softened water.

About HSP

Compared to a classic downflow softener, the HSP-version saves significantly more salt and water. The end result is a much lower cost per m³ softened water. HSP was established based on our long experience with water treatment and intensive research & development. The high softening performance is attained through a combination of program settings and a different way of assembling the softener.

For each of our downflow softener ranges, we apply specific and well-defined parameters to achieve the best performing unit. Thanks to these parameters, we ensure that a downflow softener that carries the HSP-label will offer you the specific volumetric capacity you require. It is in the end the most efficient one within its range and capabilities.

CLEAR BENEFITS

41%

DECREASES WATER
CONSUMPTION
UP TO 41 %

38%

DECREASES SALT
CONSUMPTION
UP TO 38 %

39%

LOWERS THE PRICE
OF 1L SOFTENED
WATER UP TO 39 %

Lower your ecological footprint

Preserving our planet is more important than ever. HSP offers a solution to lower your ecological footprint. The HSP-Technology makes your rinse water consumption drop up to 41 % compared to a classically sized downflow softener. Less water is required to perform an equally good regeneration. Furthermore, the consumption of salt per regeneration drops up to 38 %, decreasing the quantity of salt that goes down the drain.

Lower your costs

Next to the ecological benefits of HSP, the reduction of salt & water also has economical benefits. Water is becoming more and more scarce and the price will only go up in the future. The HSP-Technology reduces the cost price to produce 1 m³ softened water up to 39 %!

Different from classic softeners

The settings of classic downflow softeners are defined based on a more traditional & theoretical calculation model. HSP adds its own intelligence to this model thanks to advanced research & development. Each device that carries the HSP-label was thoroughly tested on higher efficiency, lowering the salt and rinse water consumption.

HSP-label

Look for the HSP-label that guarantees you the most ecological and economical downflow softener within its range.
